ANNOTATION: A study of people in isolated coves in Northern Georgia and Western North Carolina investigated the willingness of these people to talk about themselves to outsiders and to close members of their community. Their low verbal accessibility in both cases seems to negate some aspects of the kinship theory of organization usually applied to the Southern Mountaineers. A relationship between socioeconomic status and a feeling of powerlessness in controlling their lives was also found.

ANNOTATION: Describes what has come to be called the Eastern Kentucky Syndrome: men who suffer from backaches, headaches, sleeplessness, shortness of breath, chest pains and "nervousness." If hospitalized, the men are usually diagnosed as having one of several psychoneurotic disorders. Since the (frequently) unemployed men are no longer the breadwinners in eastern Kentucky, they must rationalize their position. Therefore, they are "sick." Various forms of relief benefits come as secondary gain from the "sickness."

TITLE: "Survey of Mental Health Attitudes and Practices in Selected Areas of West Virginia."
PUBLICATION: Morgantown, West Virginia University, 1964. 148p., Appendices.
DATE: 1964
CATEGORY: Mental Health
ANNOTATION: Surveyed a group of professional people (physicians, clergymen, attorneys, nurses, principals and justices of the peace) and a group of non-professionals in Greenbrier and Harrison counties. Although the professionals often function in a referral or "gatekeeper" capacity, they had only a very general grasp of the definitions of mental illness and were often unaware of available treatment facilities. The non-professionals were, predictably, less sophisticated about mental illness, but were surprisingly open-minded in their attitudes.
